

Attention FCC:

XM radio offers a unique opportunity to listen to many different genres of music, and local weather and traffic. When driving it is significantly safer to keep one channel on at a time. I live in the SF bay area and can listen to the traffic report during my 2 hour commute without having to wait for a song to finish or commercials to end. I am able to make decisions on which route to take much more quickly and can avoid sig-alerts and hot spots. Please reject the NAB petition 04-160. This is a service I choose to pay for and it should not be the decision of the NAB to make our commutes more difficult.
